Subject: [External] No to solar subsidies, I oppose taxpayers funding solar energy

I am a regular taxpayer that is from Pendleton, SC. I believe that if solar is viable it should stand on its on, without government subsidies. I have actually looked at putting solar on my house and decided against it at this point. Once the technology matures and becomes a better solution, I will be the first to join in, but not at the cost to other tax payers. Technology is a great thing as long as it can stand on its on, please don't get in the way an try to pick the winners and losers. That is not your job!!
